

Dimos Dimitrios Papageorgiou

Manchester, UK | 077-1556-1533 | dimpapa91@gmail.com | [LinkedIn](#) | [GitHub](#) | dimospapageorgiou.com

PROFESSIONAL SUMMARY

Motivated junior data professional transitioning into data engineering, with hands-on experience in Python, SQL/PostgreSQL, REST APIs, and cloud technologies (Azure). Independently designed, built, and deployed Waveline — a fully automated end-to-end data platform integrating the Last.fm, Spotify, and Deezer APIs with Claude AI and PostgreSQL — complete with a Flask web dashboard, scheduled ETL jobs, and AI-generated music insights, running in production on Railway. Skilled in relational database design, data transformation, and API integration. Background in full-stack development provides a strong understanding of how data flows across systems — showcased at dimospapageorgiou.com, an interactive portfolio consuming the platform's live production data. Eager to contribute to data pipeline development, ETL processes, and cloud data infrastructure within a collaborative engineering team.

TECHNICAL SKILLS

- **Data & Databases:** SQL, PostgreSQL (JSONB, aggregations, CTEs), Firebase, Microsoft Power BI
- **Programming:** Python (requests, psycopg2, Flask, APScheduler, python-dotenv), JavaScript
- **APIs & Integration:** REST API design & consumption, Last.fm API, Spotify API, Anthropic Claude API
- **Cloud & Infrastructure:** Microsoft Azure (AZ-900 in progress), Git, GitHub
- **Data Concepts:** ETL pipeline design, data transformation & reporting, scheduling & automation
- **Frameworks & Tools:** Node.js, Express.js, React, React Native, TDD, Agile/Scrum

PORTFOLIO PROJECTS

Waveline — Music Discovery Platform

Jun 2026 – Present

github.com/dimopapa91/music-insight-pipeline | [Live: music-insight-pipeline-production.up.railway.app](https://live.music-insight-pipeline-production.up.railway.app)

A full-stack music data engineering platform built with Python, Flask, and PostgreSQL — integrating three live APIs and serving a fully responsive web dashboard, deployed in production on Railway.

- Designed and built an end-to-end ETL pipeline in Python ingesting data from three APIs simultaneously (Last.fm, Spotify, Deezer) — storing artist tracks, listener stats, genres, and AI-generated insights from the Anthropic Claude API in PostgreSQL (JSONB), with automated daily scheduling via APScheduler
- Built a multi-page Flask web dashboard featuring real-time artist search, artist profile pages, side-by-side artist comparison with audio previews, a personalised taste profile, and a live music news feed from RSS sources and the Spotify new releases endpoint
- Implemented advanced SQL patterns (DISTINCT ON, CTEs, GROUP BY aggregations) and engineered a mobile-responsive front end with dark mode, search autocomplete, keyboard shortcuts, and a floating inline audio player using the Deezer preview API
- Deployed to production on Railway (PostgreSQL + web service) and exposed a public CORS-enabled REST endpoint serving live platform metrics — consumed in real time by my portfolio website
- Followed production engineering practices throughout: environment-based secrets management, structured logging, automated weekly HTML email digests via Gmail SMTP, and full project documentation on GitHub

Personal Portfolio — dimospapageorgiou.com

Jul 2026

github.com/dimopapa91/dimos-portfolio | [Live: dimospapageorgiou.com](https://live.dimospapageorgiou.com)

An interactive portfolio with a real-time 3D terrain and live data integrations — built with JavaScript, Three.js, and GLSL, deployed on GitHub Pages with a custom domain.

- Built a real-time 3D terrain background with Three.js and custom GLSL shaders (simplex-noise vertex displacement), performance-tuned per device with a graceful SVG fallback for non-WebGL browsers
- Integrated live data on the client: real-time production metrics from the Waveline API, latest commits via the GitHub REST API, a serverless contact form (Web3Forms), and privacy-friendly analytics
- Shipped with production polish: full SEO and Open Graph social cards, custom 404 page, optimised assets (90% image compression), and mobile-first responsive design

CERTIFICATIONS & TRAINING

Microsoft Azure Fundamentals (AZ-900)

Manchester, UK | Sep 2024 – Present

- Building foundational knowledge of cloud services, Azure architecture, and data storage solutions
- Studying key concepts: virtual machines, Azure SQL, Blob Storage, and cloud security best practices

EDUCATION

Northcoders — Full Stack Developer Bootcamp

Manchester, UK | Mar 2023 – Jun 2023

Relevant projects:

- Data-Driven News Platform — PostgreSQL & Node.js
 - Designed and implemented a normalised PostgreSQL relational database schema to store articles, users, comments and votes
 - Built RESTful API endpoints using Node.js/Express to query, filter, sort and paginate data at scale
 - Applied test-driven development (TDD) to validate database queries and data integrity
- Music Event Booking App — API Integration & Real-Time Data
 - Integrated third-party APIs (Ticketmaster, Last.fm, Deezer) to ingest and serve dynamic real-time data in a React Native app
 - Used Firebase as a real-time NoSQL database for live messaging and event data synchronisation
- Collaborated in Agile sprints with daily stand-ups, code reviews and pair programming

FreeCodeCamp — JavaScript Algorithms and Data Structures

Jan 2023 – Mar 2023

- Studied core data structures (arrays, stacks, queues, trees) and algorithmic problem-solving techniques

The University of Salford — BA Creative and Music Technology — Music Theory & Composition (2:1)

Manchester, UK | Graduated Jun 2021

WORK EXPERIENCE

Factory Coffee — Manager

Manchester, UK | Feb 2022 – Present

- Tracked and analysed operational data to optimise staffing schedules and maintain service quality during peak periods
- Trained and onboarded 11 team members, using structured performance plans to monitor progress and measure outcomes
- Demonstrated adaptability and structured problem-solving under pressure in a fast-paced environment

Freelance — Music Producer & Performer

Manchester, UK | Feb 2022 – Present

- Managed and processed large volumes of audio data using industry-standard software (Pro Tools, Logic Pro, Ableton Live)
- Collaborated with multiple stakeholders to deliver creative solutions, demonstrating strong communication and project management

INTERESTS

- Exploring data engineering tools and cloud technologies (Azure Data Factory, dbt, Apache Spark)
- Building and contributing to open-source projects
- Music production, gaming and film scoring
